

Shazam Date/Time Formats

Using the properties > format configuration in Shazam to control the display of Firebird TIMESTAMP fields.

To display a time-only in 12-hour AM / PM format with no date in Firebird (dialect 1) configure the Shazam field Type as a DateTime (not (Time) and use a single T in the Format box. This will return the time as HH:MM AM/PM - and without the seconds displaying. example below is for 12-hour AM/PM formatting in Shazam.

Report_in_time
12:00 AM

Value Editor		
Value	Filter	Expression
Report_in_time		
Query		
Distinct	False	
Value		
Header	Report_in_time	
Table	Open_requests_1_1	
Field	REPORT_IN_TIME	
Type	DateTime	
Display		
Show	Show	
Sort	Unsorted	
Format	T	
Width	0	
Alignment	Left	

This table has the different Shazam time formatting options I've found so far: <http://docwiki.embarcadero.com/Libraries/Tokyo/en/System.SysUtils.FormatDateTime>
