Unable to complete network request to host

Nels Haugen - 2021-03-22 - [Errors](#)

For the specific message of "**Unable to complete network request to host <ServerName>. Failed to establish connection.**"

Context: The program is trying to communicate with the server through a port to use the Firebird Service to connect to the database.

Causes listed in order of suggested troubleshooting:

1. *Firebird service not running.* Make sure the firebird service is running on the server. This service was installed by the LPX program to run automatically at startup
2. *No network connection to the server* (network adapter has no IP address. This can occur if using wifi but not server connected to a server)
3. *Anti-virus firewall blocking Port 3053*
